Speech Therapy Solution of Microsoft Dynamics 365

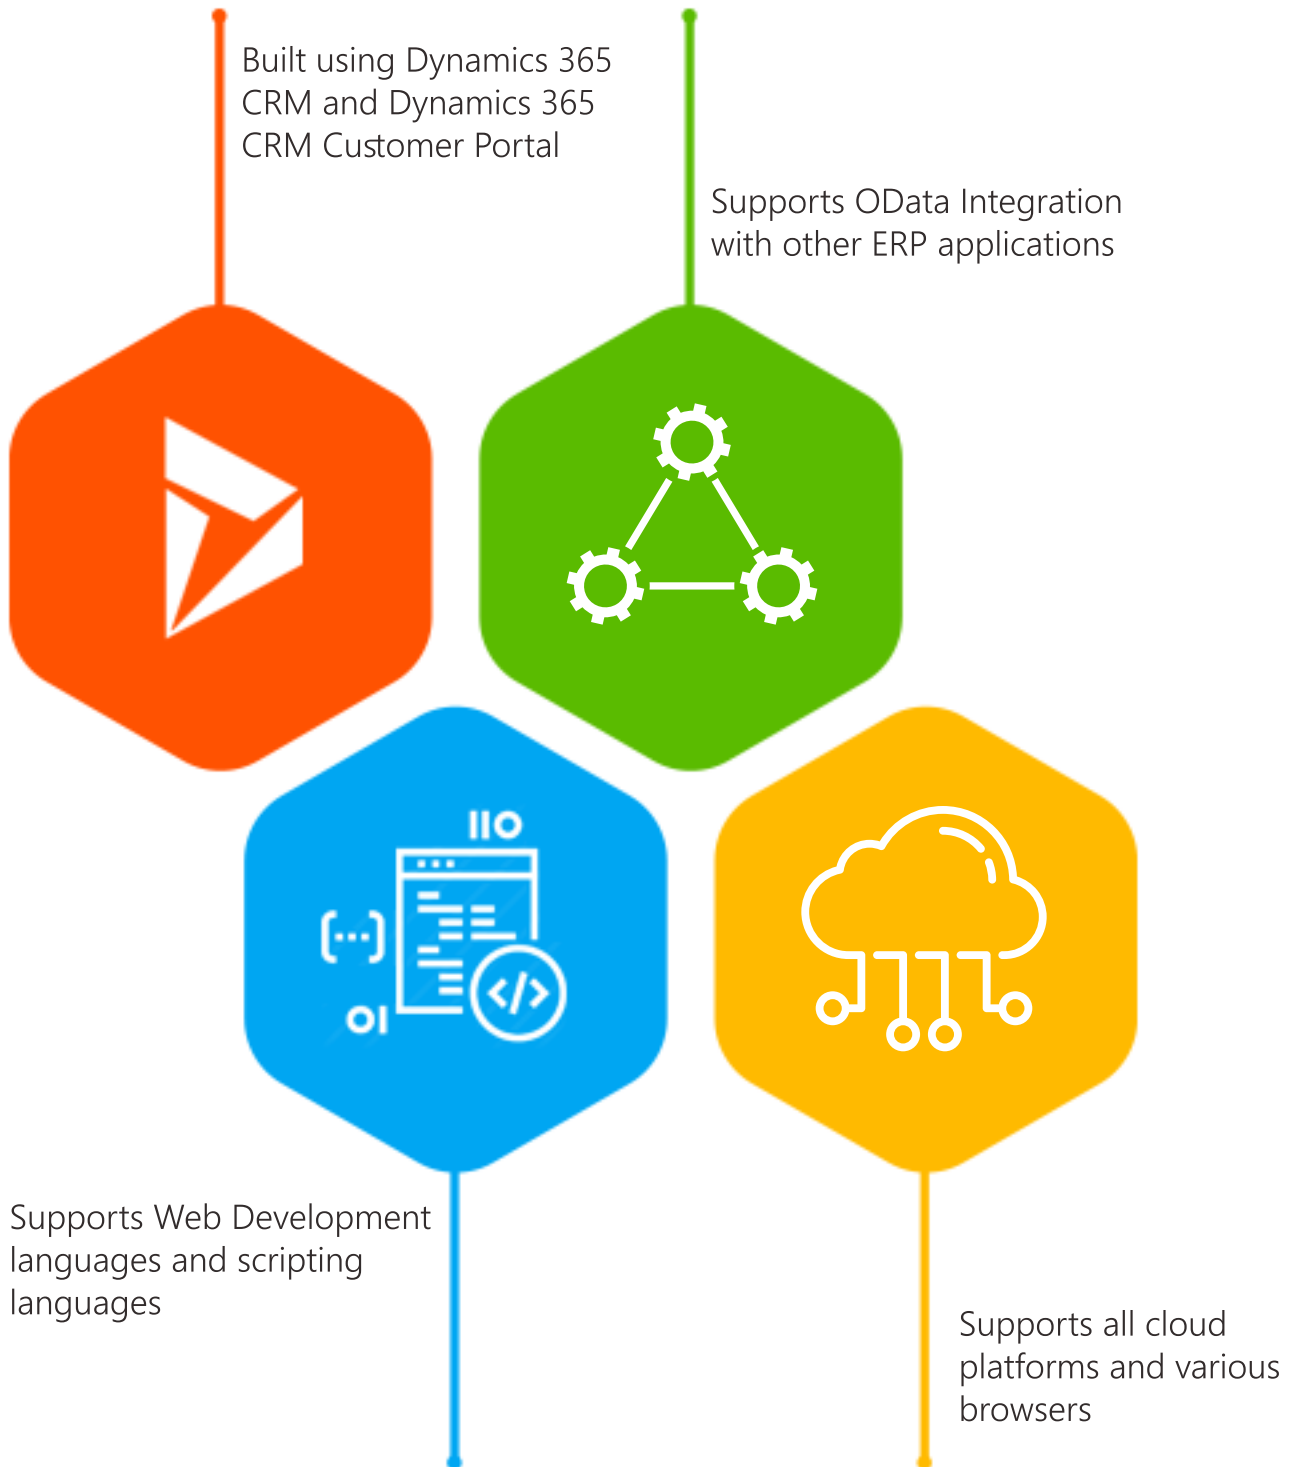

Through the healthcare industry's ambition headed for patient-centered care and the Electronic Health Record Inducement Program encouraging patient involvement, the motive for online speech therapy patient portal software is developing day by day. Likewise, patients are progressively revolving to the Internet for medical resources, creating a robust solution for fulfilling a domain specific online portal.

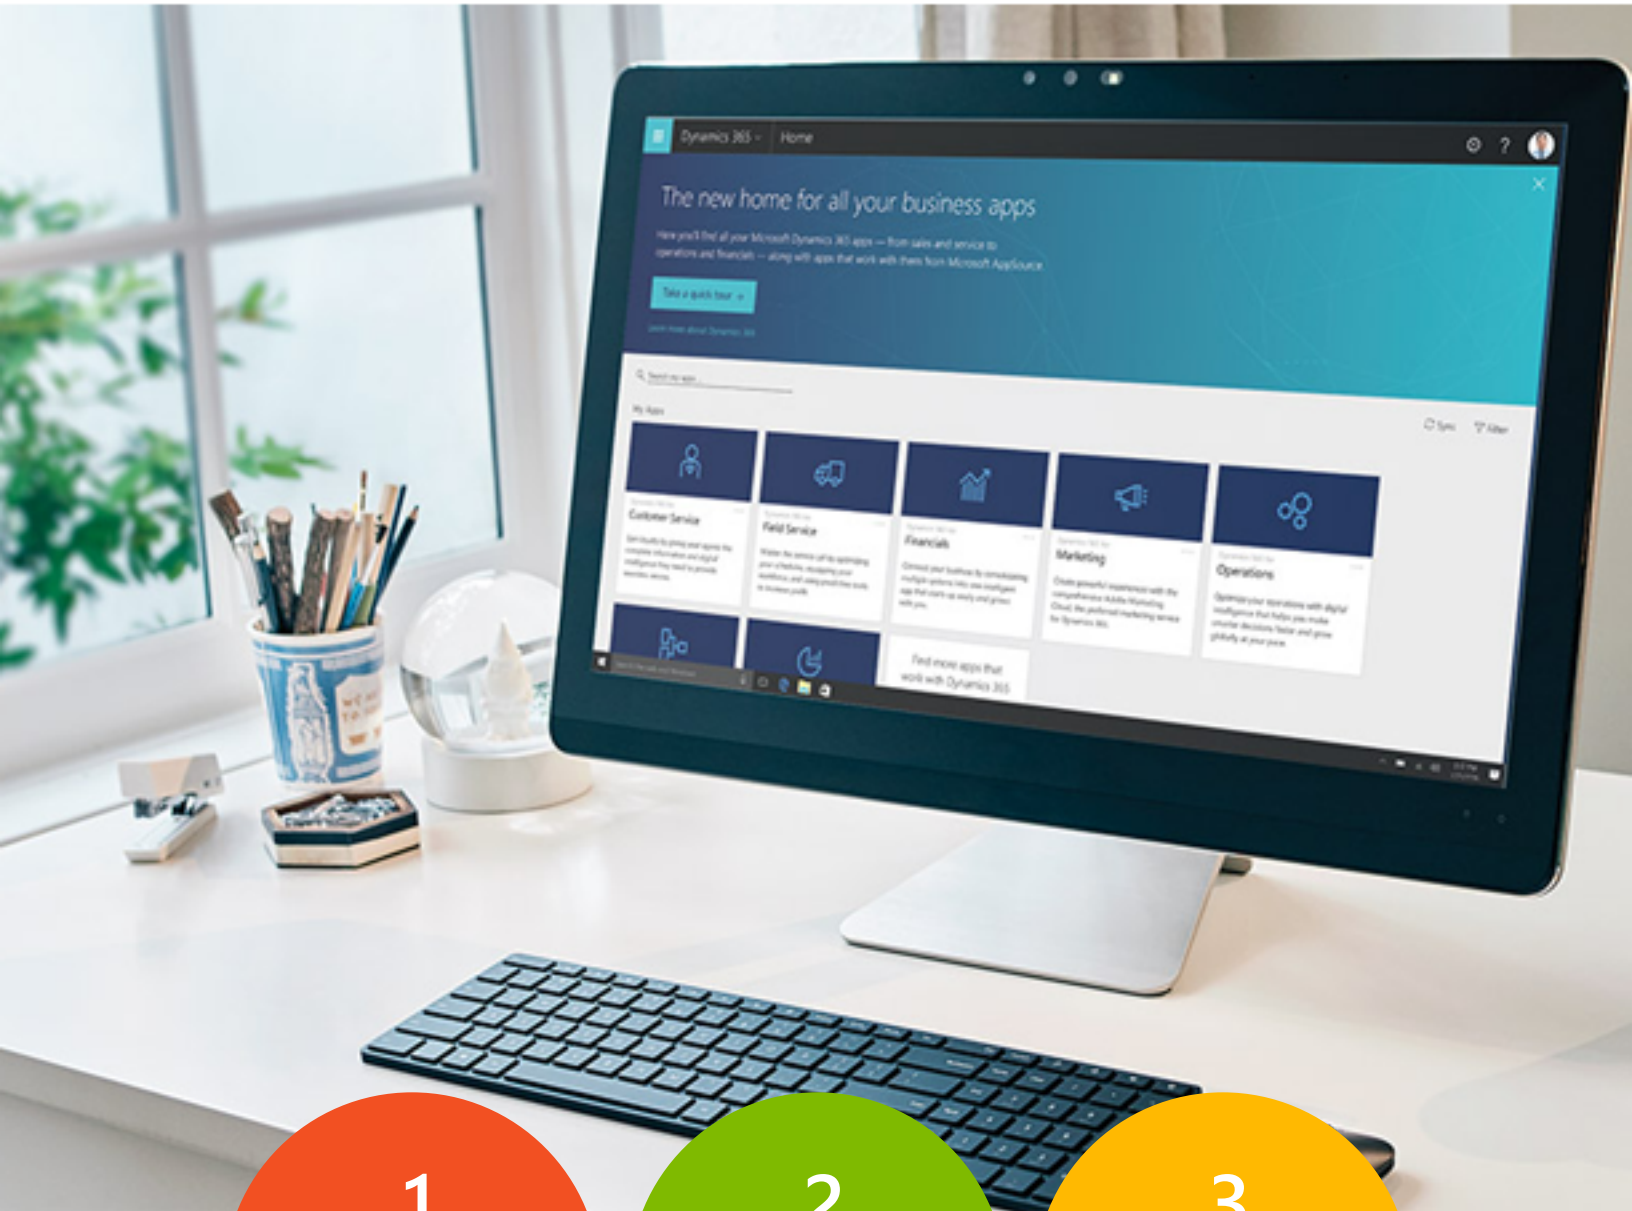

The AXPulse online speech therapy patient portal is an integrated solution that takes patients and healthcare professionals organized together. AXPulse online patient portal gives patients to access personal health records at any time, from anywhere via an Internet-connected device. With the speech therapy patient portal, patients can bring up to date their private info and finish health forms in advance to go to see their therapist or doctor. A new payment functionality is also a part of this solution which allows users to generate patient specific payment records against the processed and partially paid invoices. This not only reliefs patients to decrease waiting times for patients, but it lets staff to spend fewer time on administrative jobs.

Application Architecture

Application Features

1
Customer
Side

2
Therapist
Side

3
